A pilot project at TU Delft OPEN Publishing

Why should we do data or software peer review?

- Recognising data and software as valid research outputs
- Making the methodology of data production more open and transparent
- Promoting the principles of Open Science, FAIR data and software
- Enhancing reproducibility
- Optimising the reuse of data

Key Questions from the project

- Who would conduct this peer review? What additional skills and resources would be needed?
- What kinds of rewards and recognition would authors and peer reviewers get?
- How can we account for different disciplinary standards?
- Is 'peer review' the right term?
